

GigaContent

Fast Internet access

If you are a TV broadcaster or producer, you need effective access to the Internet when you are producing live TV. GigaInternet gives you fast Internet access from all of our points-of-events so that you can go online and access additional content when you need it most.

GigaInternet gives you unsurpassed quality because we use our own countrywide fibre-based backbone to deliver the service. This means that you get a fast symmetric data speed of 10 megabits per second. GigaInternet is an Internet access service that you can always count on because it is supported by the same reliable systems for quality and security that we use for the transmission of TV.

With GigaInternet you can quickly download additional material for your production, access your own Intranet, and much more. GigaInternet is delivered as a cabled connection (a standard Ethernet cable) to GigaContents terminal equipment at our points of events.*

Why choose GigaInternet?

- Fast access to the Internet when you are broadcasting or producing
- A reliable Internet connection from all of our points-of-events
- Very high security and reliability
- Symmetric connection at 10 megabits per second

* For security reasons you cannot connect a wireless router to the GigaInternet service.
